

HS 200 Home Cinema System

SERVICE MANUAL

harman/kardon®

Front Panel Controls

- 1** Main Information Display
- 2** Power On/Off (Standby)
- 3** Eject

- 4** USB On-The-Go Input
- 5** Headphone Jack
- 6** Volume Control

- 7** Slot Loader

1 Main Information Display: This display delivers messages and status indications to help you operate the HS 200 Controller.

2 Power On/Off (Standby): Press the button once to turn the HS 200 Controller on, press it again to put the unit in the Standby mode. Note that when the HS 200 Controller is switched on, the Power Indicator around the button turns blue.

3 Eject: Press this button to release a disc from the loader.

4 USB On-The-Go Input: This input may be used to temporarily connect a USB thumb device or portable hard disk for direct playback of audio, image or video files or a USB hub. The USB inputs are designed to power a single USB device at a time. If additional hard disks are connected through a hub it is necessary that additional external power supplies are used to power the hub and hard disks.

5 Headphone Jack: This jack may be used to listen to the system's output through a pair of headphones. Be certain that the headphones have a standard 3.5 mm stereo phone plug. Note that the main room speakers will automatically be turned off when the headphone jack is in use.

6 Volume Control: Turn this knob clockwise to increase the volume, counterclockwise to decrease the volume. If the system is muted, adjusting volume control will automatically release the unit from the silenced condition.

7 Slot loader: Gently insert a CD or DVD into this slot, with the printed side of the disc facing up. Note there is no drawer. Press the **Eject Button 3** to release the disc.

Front Panel Display

- A** Disc Type Indicators
- B** Playback-Mode Indicators
- C** Progressive Scan Indicator
- D** Parental Lock Indicator
- E** Time Indicators
- F** Video Format Indicators

- G** Source Indicators
- H** Repeat Indicators
- I** VCD Playback Control Indicator
- J** Random Indicator
- K** A-B Repeat Indicator
- L** Program Indicator

- M** Angle Indicator
- N** Title Indicators
- O** Chapter/Track Number Indicators
- P** Video Output Indicators

A Disc Type Indicators: The CD or DVD indicator will illuminate to show the type of disc currently being played.

B Playback-Mode Indicators: These indicators light to show the current playback mode:

- ▶ Lights when a disc is playing in the normal mode
- ▶▶ Lights when the disc is in the Fast Search Forward mode. The on-screen banner display indicates the selected speed (2x, 8x, 16x, 100x).
- || Lights when the disc is paused.
- ◀◀ Lights when the disc is in the Fast Search Reverse mode. The on-screen banner display indicates the selected speed (2x, 8x, 16x, 100x).

C Progressive Scan Indicator: This indicator lights when the unit sends out a progressive scan signal.

D Parental Lock Indicator: This indicator lights when the parental-lock system is engaged in order to prevent anyone from changing the rating level without a code.

E Time Indicators: These positions in the indicator will show the running time of a DVD in play. When a CD is playing, these indicators will show the current track time, time remaining in the current track, or the total remaining time on the disc.

NOTE: The Indicators **NOE** will also display text messages about the DVD's status, including **Reading** when a disc is loading, **STANDBY** when the unit is turned off, and **Disc Error** when a disc not compatible with the DVD is put into the play position.

F Video Format Indicators: These indicators will represent the video format currently playing.

G Source Indicators: These indicators will light to show which source is currently selected.

H Repeat Indicators: These indicators light when any of the Repeat functions are in use.

I VCD Playback Control Indicator: This indicator lights when the playback control function is turned on with VCDs.

J Random Indicator: This indicator lights when the unit is in the Random Play mode.

K A-B Repeat Indicator: This indicator lights when a specific passage for repeat playback has been selected.

L Program Indicator: This indicator lights when the programming functions are in use.

M Angle Indicator: This indicator blinks when alternative viewing angles are available on the DVD currently playing.

N Title Indicators: These two positions in the display will show the current title number when a DVD disc is playing.

O Chapter/Track Number Indicators: When a DVD disc is playing, these two positions in the display will show the current chapter. When a CD disc is playing they will show the current track number.

P Video Output Indicators: These indicators will represent the active video output.

Rear Panel Connections

- | | | |
|---------------------------|--------------------------|-----------------------------|
| 1 Composite Video Output | 8 Subwoofer Output | 15 Coaxial Digital Output |
| 2 S-Video Output | 9 Coaxial Digital Input | 16 Subwoofer Trigger Output |
| 3 Component Video Outputs | 10 Optical Digital Input | 17 USB On-The-Go Input |
| 4 Scart TV Output | 11 Analog Audio Outputs | 18 HDMI Output |
| 5 AC Power Cord | 12 Front Speaker Outputs | 19 Remote IR Output |
| 6 FM Antenna | 13 Remote IR Input | |
| 7 Audio In | 14 TV Audio In | |

1 Composite Video Output: Connect this jack to the video input on a television or video projector.

2 S-Video Output: Connect this jack to the S-Video input on a television or video projector.

3 Component Video Outputs: These outputs carry the component video signals for connection to display monitors with component video inputs. For standard analog TV's or projectors with inputs marked Y/Pr/Pb or Y/Cr/Cb, connect these outputs to the corresponding inputs. If you have a high-definition television or projector that is compatible with high scan rate progressive video, connect these jacks to the "HD Component" inputs. Note that if you are using a progressive scan display device, then "Progressive" must be selected in the Video Set-up Menu in order to take advantage of the progressive scan circuitry. See page 20 for more information on progressive scan video.

IMPORTANT: These jacks should NOT be connected to standard composite video inputs.

4 SCART OUT (TV): If your TV has a SCART socket, you can connect a SCART cable to your TV and to your DVD Player for improved video quality. The SCART cable carries both audio and video. You can select Composite Video or RGB video for that SCART connector's video output signal.

5 AC Power Cord: Connect this plug to an AC outlet. If the outlet is controlled by a switch, make certain that it is in the ON position.

6 FM Antenna: Connect to the supplied FM antenna.

7 Audio In: Connect to a line-level analog audio source: TV, tape player, Minidisc, PC, etc.

8 Subwoofer Output: Connect to the SUB/LFE input on the subwoofer.

9 Coaxial Digital Input: Connect the coax digital output from a DVD player, HDTV receiver, LD player, MD player, satellite receiver or CD player to this jack. The signal may be either a Dolby Digital signal, DTS signal or a standard PCM digital source. Do not connect the RF digital output of an LD player to these jacks.

10 Optical Digital Input: Connect the optical digital output from a DVD player, HDTV receiver, LD player, MD player, satellite receiver or CD player to this jack. The signal may be either a Dolby Digital signal, DTS signal or a standard PCM digital source.

11 Analog Audio Outputs: Connect these jacks to the analog audio input on a TV set or external audio system for analog audio playback or to the RECORD/INPUT jacks of an audio recorder for recording.

12 Front Speaker Outputs: Connect these outputs to the matching + or – terminals on your left and right speakers. In conformance with the new CEA color code specification, the White terminal is the positive, or "+" terminal that should be connected to the red (+) terminal on Front Left speaker with the older color coding, while the Red terminal is the positive, or "+" terminal that should be connected to the red (+) terminal on Front Right speaker. Connect the black (–) terminals on the HS to the black (–) terminals on the speakers. See page 14 for more information on speaker polarity.

13 Remote IR Input: If the HS 200's front-panel IR sensor is blocked due to cabinet doors or other obstructions, an external IR sensor may be used. Connect the output of the sensor to this jack.

Rear Panel Connections

14 TV Audio Input: If your screen is connected to the HS by an HDMI, Component, S-Video or Composite cable, connect the analog output of your TV to this input. If you have your TV connected to the HS with a Scart cable, an audio connection to the TV Input is not necessary.

Note: You'll find more details about all Audio/Video connections under Setup and Connections on the following pages.

15 Coaxial Digital Output: Connect this jack to the matching digital input connector on a digital recorder such as a CD-R or MiniDisc recorder.

16 Subwoofer Trigger Output: Connect this trigger output to the trigger input of the Harman Kardon subwoofer, so that the subwoofer will switch on and off at the same time as the rest of the system.

17 USB On-The-Go Input: This input may be used to temporarily connect a USB thumb device or portable hard disk for direct playback of audio, image or video files, a digital photo camera or a USB hub.

18 HDMI Output: Connect this output to the HDMI input of high-definition LCD, Plasma or video projector for the best possible picture quality.

19 Remote IR Output: This connection permits the IR sensor in the receiver to serve other remote controlled devices. Connect this jack to the "IR IN" jack on Harman Kardon or other compatible equipment.

Remote Control

- 1 Power On/Source Selection Button
- 2 Power Off Button
- 3 Subtitle Button
- 4 Title Button
- 5 Angle Button
- 6 Audio Button
- 7 Enter Button

Remote Control

❶ Power On/Source Selector Buttons:

Pressing one of these buttons will perform three actions at the same time. First, if the HS System is not turned on, this will power up the unit. Next, it will select the source shown on the button as the input to the HS System. Finally, it will change the remote control so that it controls the device selected.

❷ **Power Off Button:** Turns off the HS system to standby mode.

❸ **Subtitle Button:** When a DVD is playing, press to select a subtitle language or to turn subtitles off.

❹ **Title Button:** When a disc is playing, press to make the player go back to the first section of the disc.

❺ **Angle Button:** Press to access various camera angles on a DVD (If the DVD contains multiple camera angles) or to rotate JPEG images.

❻ **Audio Button:** Press to access various audio languages on a DVD (If the DVD contains multiple audio streams).

❼ **Enter Button:** Press this button to activate a setting or option.

❽ **Eject Button:** Press to release the disc from the loader.

❾ **Set-up/OSD:** Press to access the On Screen Display Menu.

❿ **Arrow buttons (◀/▶/▲/▼) Buttons:** Use to move the cursor in the OSD.

⓫ **Mute Button:** Mutes the sound.

⓬ **Menu Button:** Displays the actual DVD Disc Menu on the TV screen in play mode. When playing discs with JPEG images, pressing this button will access the thumbnails.

⓭ **Pause Button:** Freezes a picture (with DVD/VCD) and pauses the playback signal (CD) when a disc is playing. Press again for normal playback.

⓮ **Status Button:** Press while a disc is playing to view banner display. Use the ARROW buttons to move through the different features in the Banner Display. When a symbol is highlighted, press ENTER on the remote to select it.

⓯ **Skip/Step (Previous) Button:** Press to go to beginning of current track. Press again quickly to go to beginning of previous track. After pressing the PAUSE button, each press of this button will move the image in reverse frame by frame.

⓰ **Skip/Step (Next) Button:** Press to go to beginning of next track. After pressing the PAUSE button, each press of this button will move the image forwards frame by frame.

⓱ **Play Button:** Begins to play disc (closes disc tray first, if it is open).

⓲ **Search/Slow (Rev.) Button:** Allows you to search in reverse through a disc while it is in play mode. Each time you press this button, the search speed changes as indicated by a number of arrows on the right top of your screen. After pressing the PAUSE button, each press of this button will change the slow down speed indicated by a number of arrows in the right top of the screen.

⓳ **Stop Button:** Stops playing a disc. When a disc is playing, if you press STOP and PLAY, the disc will resume play, i.e. it will start from the same point on the disc where the unit was stopped. If you press STOP twice and the PLAY button, the disc will start play from the beginning.

⓴ **Search/Slow (Fwd.) Button:** Allows you to search forward through a disc while it is in play mode. Each time you press this button, the search speed changes as indicated by a number of arrows on the right top of your screen. After pressing the PAUSE button, each press of this button will change the slow down speed as indicated by a number of arrows in the right top of the screen.

⓵ **Macro Buttons:** Press these buttons to store or recall a "Macro", which is a pre-programmed sequence of commands stored in the remote. (See page 26 for more information on storing and recalling macros.).

⓶ **Pic +/Pic - Button:** Pressing these buttons in JPEG mode will move to the previous or next image.

⓷ **Zoom Button:** When a DVD or VCD is playing, press this button to zoom the picture so that it is enlarged. There are 4 steps to the zoom function, each progressively larger. Press through each of the zoom stages to return to a normal picture. The Zoom function is not available when watching High Definition material.

⓸ **Playlist Button:** Press this button to change the playback order of the disc.

⓹ **Random Button:** Press for RANDOM playback in random order.

⓺ **A-B Button:** Press to select section A-B and to play repeatedly.

⓻ **Volume Up/Down:** Increase/decrease the master volume level.

⓼ **LIGHT Button:** Press to illuminate remote controller.

⓽ **Numeric Keys Button:** Select numbers by pressing these buttons.

⓿ **Repeat Button:** Press to go to the Repeat menu. You can repeat a chapter, track or the entire disc.

⓾ **Clear Button:** Press to remove the Banner menu from the screen.

⓿ **Video output Button:** Press to toggle between the S-Video, Component Video Outputs and SCART RGB video output of the HS System player. Note that the Composite and SCART Composite Video Outputs on the player are always active, which could help you make your initial setup.

⓿ **Video format Button:** Press this button to change the resolution of the Component Video Output between standard definition and progressive definition (PAL interlaced and PAL progressive; NTSC interlaced and NTSC progressive).

⓿ **Learn Button:** Press this button to begin the process of "learning" the codes from another product's remote into the HS System's remote. (See page 26 for more information on using the remote's learning function.)

⓿ to ⓿ These buttons do not have a direct function with the HS 200, but can be programmed to control some of the functions of your TV using the Learning function of the remote control.

⓿ **IR Transmitter Window:** Point this window towards the HS when pressing buttons on the remote to make certain that infrared commands are properly received.

⓿ **Program Indicator:** This three-color indicator is used to guide you through the process of learning commands from a remote into the HS's remote code memory. (See page 26 for more information on programming the remote.)

Troubleshooting

If you experience any of the following difficulties while using the system, use this troubleshooting guide to help you remedy the problem. Should any problem persist, consult your authorized Harman Kardon dealer.

No power.

- Is the power cord firmly plugged into the power outlet?
- One of the safety mechanisms may be operating. In this event, unplug the player from the power outlet briefly and then plug it in again.

No picture.

- Check that the system is connected correctly and securely.
- The video cable may be damaged. Replace it with a new one.
- Make sure the system is connected to a video input on the TV (see page 14).
- Make sure the TV is turned on.
- Make sure the correct video input on the TV is selected for viewing with this system.

Noise (interference) appears in the picture.

- Clean the disc.
- If video from this system has to go through your VCR to get to your TV, the copy-protection applied to some DVD programs could affect picture quality. If you still experience problems after checking your connections, please try connecting your DVD system directly to your TV's S-Video input, if your TV is equipped with this input (see page 14).

The aspect ratio of the screen is wrong (picture vertically expanded) when you play a wide picture even though you set "TV DISPLAY" in the SETUP menu to "16:9".

- If you connect the system with the SCART cable, connect directly to the TV. Otherwise the autoswitch function of the aspect ratio for the TV may not work.
- If the TV is not connected with a SCART cable to the HS, or if the autoswitch function does not work you should turn the TV to "16:9" (if possible with your TV).
- Depending on the TV, you may not be able to change the aspect ratio. In that case (TV not adjustable to 16:9) do not select "16:9" in the TV Display. Then, no change of the aspect ratio is needed.

There is no sound or volume is very low.

- Check that the speakers and components are connected correctly and securely.
- Make sure that you have selected the correct source on the system.
- Press **MUTE** on the remote control, if the words MUTE ON are blinking on the front panel display.
- The protective circuitry has been activated because of a short circuit. Turn off the system, eliminate the short circuit problem and turn on the power again.
- The audio interconnect is damaged. Replace it with a new one.
- The system is in pause mode or in slow-motion play mode, or fast forward or fast reverse. Press ► to return to normal play mode.
- Check the speaker settings (see page 19).

The left and right channels are unbalanced or reversed.

- Check that the speakers and components are connected correctly and securely.

Severe hum or noise is heard.

- Check that the speakers and components are connected securely.
- Check that the connecting cords are away from a transformer or motor and at least 3 meters away from fluorescent light.
- Move your TV away from the audio components.
- The plugs and jacks are dirty. Wipe them with a cloth slightly moistened with alcohol.
- Clean the disc.

The volume goes down automatically and can not be increased.

- The internal temperature is too high. Wait approximately one minute for the amplifier to reach normal working temperature.

Radio stations cannot be tuned in.

- Check that the antenna is connected correctly. Adjust the antenna and connect an external antenna if necessary.
- The signal strength of the stations is too weak for automatic tuning. Use manual tuning.
- No stations have been preset.
- The tuner mode is not selected, select the Radio mode.

The remote does not function.

- Remove any obstacles between the remote control and the system.
- Move the remote control closer to the system.
- Point the remote control at the remote sensor on the front panel.
- Replace all the batteries in the remote control with new ones if they are weak.
- Check that the batteries are loaded correctly.

The disc does not play.

- There is no disc inside. ("NO DISC" appears on the front panel display and the TV screen.) Insert a disc.
- Insert the disc correctly with the playback side facing down on the disc tray.
- Clean the disc.
- The system cannot play CD-ROM's, etc. (see page 3).
- DVD with wrong region code (see page 13).

The system starts playing the DVD automatically.

- The DVD features the auto playback function.

Playback stops automatically.

- Some discs include an auto pause signal. When playing such a disc, the system stops playback at the signal.

Troubleshooting

Track Skip or direct select with numeric buttons, Search, Slow-motion play, repeat play or Program play, etc., cannot be done.

- Depending on the DVD or VCD, some of the above operations may not be available (Playback control).

Messages do not appear on the TV screen in the language you want.

- Select the language for Display and Preferred Subtitle in the SETUP menu (see page 18). For all messages from the DVD (DVD menu, subtitles) in the proper language the disc must have the language you selected, if not, another language will be selected.

The audio language cannot be changed when you play a DVD.

- Multilingual sound is not recorded on the DVD.
- Changing the language for the sound by the Audio button on the remote or the Audio line in the Player Menu is prohibited on the DVD. In that case the audio language must be selected by the main menu on the DVD.

The subtitle language cannot be changed when you play a DVD.

- Multilingual subtitles are not recorded on the DVD.
- Changing the language for the subtitles by the Subtitle button on the remote or the Subtitle line in the Player Menu is prohibited on the DVD. In that case the subtitle language must be selected by the main menu on the DVD.

The subtitles cannot be turned off when you play a DVD.

- Depending on the DVD, you may not be able to turn the subtitles off.

The angles cannot be changed when you play a DVD.

- Multi-angles are not recorded on most DVDs.
- Change the angles when the angle mark appears on the TV screen.
- Changing the angles is prohibited on some DVDs.

The system does not operate properly.

- Static electricity, etc., may affect the system's operation.
Disconnect the AC power cord, then connect it again.

Please also refer to the Troubleshooting guide contained in your loudspeaker Owners Manual.

Glossary

Bit rate

Value indicating the amount of video data compressed in a DVD per second. The unit is Mbps (megabit per second). 1 Mbps indicates that the data per second is 1,000,000 bits. The higher the bit rate, the larger the amount of data. However, this does not always mean higher quality pictures.

Chapter

Sections of a picture or a music piece on a DVD that are smaller than titles. Many titles are composed of several chapters, but many others are not. Each chapter is assigned a chapter number enabling you to locate the chapter you want.

Dolby Digital ("5.1", "AC-3")

This sound format for movie theaters is more advanced than Dolby Pro Logic Surround. In this format, the rear speakers output stereo sound with an expanded frequency range and a subwoofer channel for deep bass is independently provided. This format is also called "5.1" because the subwoofer channel is counted as 0.1 channel (since it functions only when a deep bass effect is needed). All six channels in this format are recorded separately for superior channel separation. Furthermore, since all the signals are processed digitally, less signal degradation occurs. The name "AC-3" comes from the fact that it is the third audio coding method to be developed by the Dolby Laboratories Licensing Corporation.

Manufactured under license from Dolby Laboratories. "Dolby", "AC-3", "Pro Logic" and the Double-D symbol are trademarks of Dolby Laboratories. Confidential Unpublished Works. © 1992.1997 Dolby Laboratories, Inc. All rights reserved.

Dolby Pro Logic II Surround

This is a method of decoding stereo or surround recordings that produces five channels from two-channel sound. Compared with the former Dolby Surround system, Dolby Pro Logic II Surround reproduces left-to-right panning more naturally and localizes sounds more precisely. To take full advantage of Dolby Pro Logic II Surround, you should have a pair of rear speakers and a center speaker. The rear speakers output stereo sound.

DTS

Digital audio compression technology developed by Digital Theater Systems, Inc. This technology conforms to 5.1-channel surround. The rear channels are stereo and there is a discrete subwoofer channel in this format. DTS provides 5.1 discrete channels of high quality digital audio. Good channel separation is realized, because all channels are recorded discretely and processed digitally.

Manufactured under license from Digital Theater Systems, Inc. US Pat. No. 5,451,942 and other worldwide patents issued and pending. "DTS" and "DTS Digital Surround" are trademarks of Digital Theater Systems, Inc. © 1996 Digital Theater Systems, Inc. All rights reserved.

MPEG AUDIO

International standard coding system to compress audio digital signals authorized by ISO/IEC. MPEG 1 conforms to up to 2-channel stereo, used on some DVD's as alternate (other language) track.

DVD

A disc that contains up to 8 hours of moving pictures even though its diameter is the same as a CD. The data capacity of a single-layer and single-sided DVD, at 4.7 GB (Giga Byte), is 7 times that of a CD. Furthermore, the data capacity of a dual-layer and single-sided DVD is 8.5 GB, a single-layer and double-sided DVD 9.4 GB, and a dual-layer and double-sided DVD 17 GB. The picture data uses the MPEG 2 format, one of the worldwide standards of digital compression technology. The picture data is compressed to about 1/40 of its original size. The DVD also uses the variable rate coding technology that changes the data to be allocated according to the status of the picture. The audio data is recorded in Dolby Digital, DTS and/or PCM, allowing you to enjoy more natural audio presence. Furthermore, various advanced functions such as multi-angle, multilingual, and subtitles may be provided with the DVD.

Multi-angle function

Various angles or viewpoints of the video camera for a scene are recorded on some DVDs.

Multilingual function

Several languages for the sound or subtitles in a picture are recorded on some DVDs.

Parental Control

A function of some (particular US) DVD's to limit playback of the disc by the age of the users. The limitation varies from disc to disc. When it is activated, playback is completely prohibited, violent scenes are skipped or replaced with other scenes and so on.

Title

The longest sections of a picture or a music piece on a DVD; a movie, etc., for a picture piece on video software; or an album, etc., for a music piece on an audio software. Each title is assigned a title number enabling you to locate the title you want.

Track

Sections of a music piece on a CD. Each track is assigned a track number enabling you to locate the track you want.

PCM

Pulse code modulation, an uncompressed data formation.

NTSC

National TV Systems Committee: a video standard used in USA.

PAL

Phase Alternation Line: a video standard used in many European countries.

HS 200 Controller Specifications

DVD player

Pickup:	Semiconductor laser, wavelength 650nm
Signal system:	NTSC / PAL
Video signal horizontal resolution:	More than 480 lines (DVD)
Video signal-to-noise ratio:	More than 60 dB (DVD)
Audio frequency response: (Stereo)	DVD (PCM): 20 Hz ~ 22 kHz (+/- 1.0 dB) CD (PCM): 20 Hz ~ 20 kHz (+/- 1.0 dB)
Audio signal-to-noise ratio:	More than 80 dB (PCM)
Total harmonic distortion:	Less than 0.01% (PCM)
Dynamic range:	DVD (PCM): More than 85 dB (EIAJ, 2 kHz) CD: More than 85 dB (EIAJ)

FM Tuner

System:	PLL quartz-locked digital synthesizer system
Tuning range:	87.50 ~ 108.00 MHz
Antenna terminals:	75 Ohms, unbalanced
Intermediate frequency:	10.7 MHz

Video Outputs HDMI

Component Video Output:	Y: 1 Vp-p/75 Ohms, sync negative polarity Cr: 0.7 Vp-p/75 Ohms Cb: 0.7 Vp-p/75 Ohms
CVBS Video:	1 Vp-p 75 Ohms
S-video:	Y: 1 Vp-p 75 Ohms C: PAL 0.3 Vp-p 75 Ohms / NTSC 0.286 Vp-p 75 Ohms

Audio line Outputs

Audio L/R:	2 Vrms, 1 kilohms
------------	-------------------

General

Power requirements:	AC 230 V, 50 Hz
Max power consumption:	300 W
Idle power consumption:	Less than 2 W
Dimensions (WxHxD):	350mm x 84mm x 250mm
Weight:	3.8 kg

NO.	REVISION DATE	REV	REVISION HISTORY		
1	Aug 12, 2006	1.4	1. The controlling on -12V was changed to by USB5V from by S-T, because the driving capability of S-T wasn't enough, this made leds abnormal 2. Change R533 from 1K to 3.6K 3. Change C516 from 104 to 224/25V	4. Change R567 from 56K to 27K 5. Add R590 10K and C535 474/50V 6. Change FB501 to color coded inductance 4.7UH 7. Add R532 10K between GND and U511, preventing unexpected actions on USB5V	8. Add C536 102/25V 9. Change the value of T501 to 400UH
2	Sep 22, 2006	1.5	1. Add a discharge circuit of +34V power 2. Connect USB5V to CN504.6 to replace +3.3V, connect A+5V to CN504.10 to replace USB5V, because of the change of power supply 3.3V on main board	3. Delete D518, and change U510 from BA033BCO to AV1117-3.3	
3	Nov 11, 2006	2.0	1. Change CY501, CY502 from 471/400V to 102/400V 2. Change CX501, CY502 from 334/250V to 224/400V 3. Change LF501 from LCL-203A to LCL-303A, change LF502 from 20mH to LCL-303A and change L502, L507 from 47uH to L0620-050	5. Change CY505 from 222/250V to 471/250V 4. Change C502 from 474/630VDC to 105/450VDC 6. ADD beads L509, L510 0.085K 7. Delete R588, change R572 from to 0.5/3W	
4	Dec 12, 2006	2.1	1. Add R518 620K-1%, change R515 R516 from 1M-1% to 680K-1% 2. Add R573 3.3M-5%, change R564 R565 from 4.7M-5% to 3M-5%	3. Add R574 3.3M-5%, change R562 R563 from 4.7M-5% to 3M-5% 4. Reverse net lable of CN504 on PCB
