Price	£179	About £339	Technomate

Final Conclusions:

The Technomate is the 'new kid on the block' compared to the Dreambox.

Considering the TM-9100 has only been available for a few months and has a few good images already, the future can only be better. The Dreambox has been available for about 3 years and as such, has a lot more support.

At the end of the day, they both do the same 'job' (if you know what I mean!), but the quality of the hardware of the TM-9100 is better and with a low price tag of £179 (about 50% cheaper than Dreambox 7020), you can't go wrong!
